

# Auto Endorsement — Full User Journey

**Product:** Auto · **Module:** Endorsement

**URLs:** /endorsements/auto · edit /endorsements/auto/:id/edit · detail /endorsements/auto/:id

**Generate from:** approved Auto policy → Generate Endorsement

## 1. Journey overview

## 2. What the user can do

| Step          | User action                | When allowed         | API                                                   | Main table / columns                       |
|---------------|----------------------------|----------------------|-------------------------------------------------------|--------------------------------------------|
| 1 Generate    | From APV policy → Generate | Policy<br>status=APV | POST /api/policies/generate-auto-endorsement/{policy} | SP → new ins_policy + ins_auto_data_master |
| 2 Edit Info   | Policy info / GENERAL      | status=PND + UPDATE  | Auto form routes                                      | ins_auto_data_master                       |
| 3 Vehicles    | Add / delete / amend       | status=PND           | vehicle endpoints                                     | ins_auto_data_detail.endorsement_stage     |
| 4 Deductible  | Deductible tab             | edit mode            | deductible APIs                                       | deductible tables                          |
| 5 Config      | Business / Policy Type     | GENERAL only (UI)    | PUT /api/endorsements/{id}                            | ins_policy.business_type, policy_type      |
| 6 Commission  | Commission rows            | edit                 | commission APIs                                       | ins_policy_commission_data                 |
| 7 Reinsurance | Shares until 100%          | edit                 | RI APIs                                               | ins_reinsurance_data (Σ share = 1)         |

| Step                | User action                 | When allowed                | API                                                   | Main table / columns                   |
|---------------------|-----------------------------|-----------------------------|-------------------------------------------------------|----------------------------------------|
| <b>8 Submit</b>     | Submit button               | RI complete                 | PUT /endorsement-service/update-submit-status/{id}    | ins_policy.approved_status = SBM       |
| <b>9 Approve</b>    | Dialog → Approve            | See gate                    | POST /api/endorsements/approve/{id}                   | ins_policy.status = APV                |
| <b>10 Reject</b>    | Dialog → Reject + remark    | <b>Same gate as Approve</b> | same approve API REJ                                  | status = REJ , approved_reason , audit |
| <b>11 Revise</b>    | List revise                 | status=REJ                  | POST /api/endorsements/revise/{id}                    | status=PND , reason null               |
| <b>12 Delete</b>    | Cancel endorsement          | not APV                     | DELETE /api/endorsements/{id}                         | SP ins_prod_auto_cancel_endorsement    |
| <b>13 Print</b>     | Endt / Invoice / CDN / Cert | print rules                 | /endorsement-service/.../download-*                   | read                                   |
| <b>14 Next endt</b> | Generate from this endt     | status=APV                  | POST /api/endorsements/generate-auto-endorsement/{id} | same generate SP                       |

**Types** ( ins\_auto\_data\_master.endorsement\_type ): GENERAL · ADD/DELETE · CANCELLATION · RE\_INVOICE · CUSTOM · AMEND\_ENDT\_PREMIUM · AMEND\_SUM\_INSURED\_PREMIUM

### 3. Approve / Reject gate

Button shows only when **all** are true:

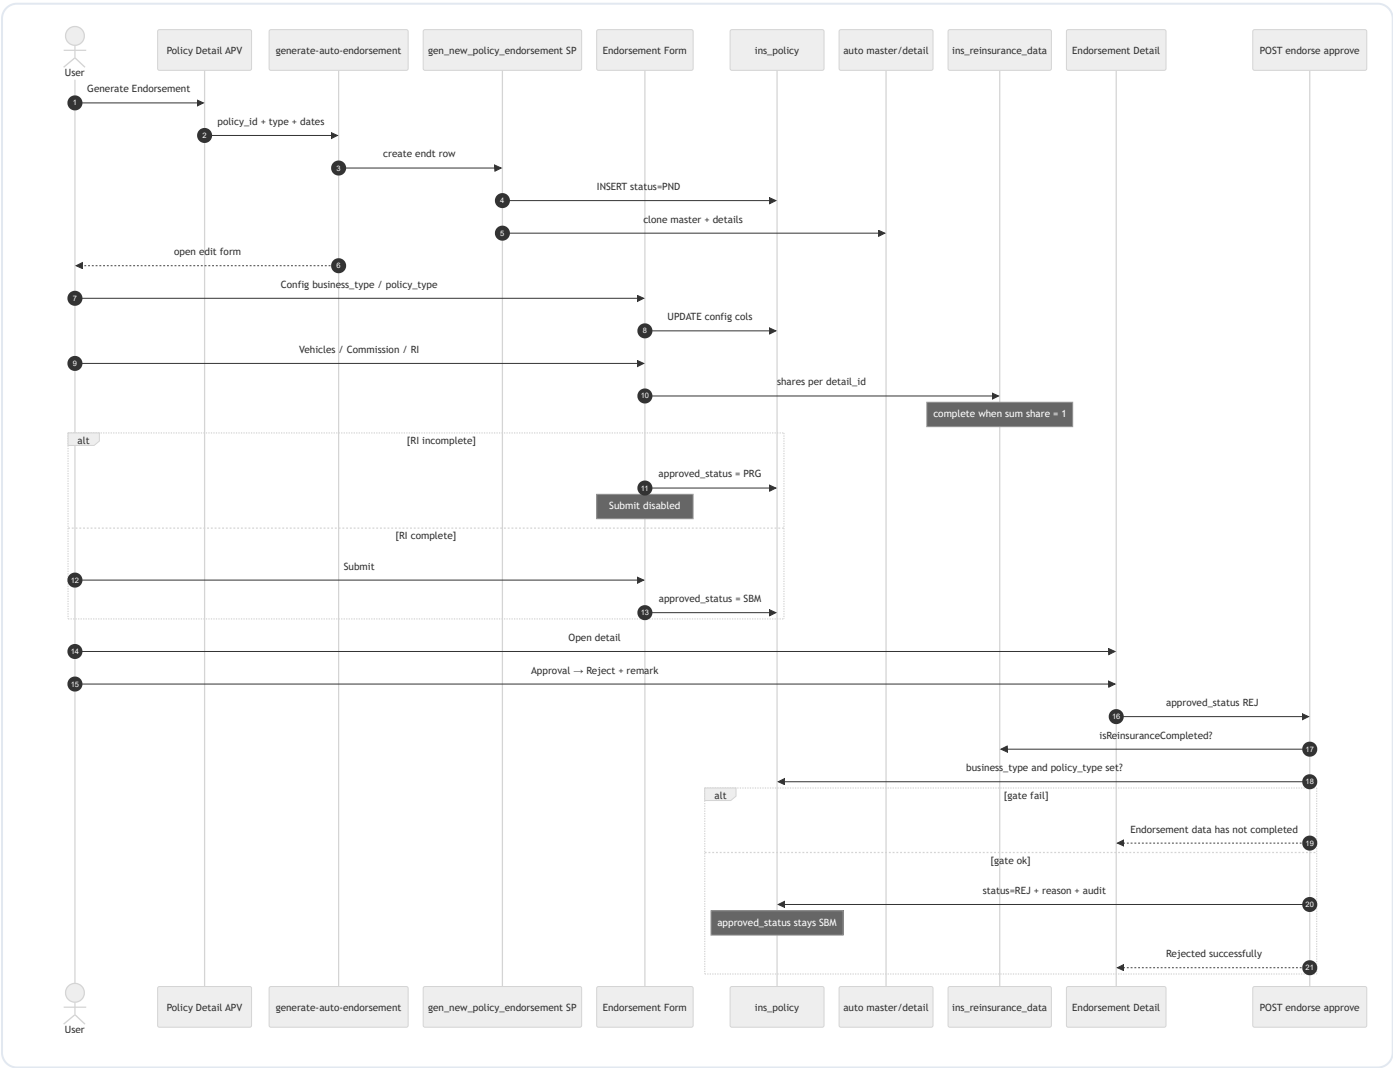

| # | Gate                           | Where   | Table / column                                             |
|---|--------------------------------|---------|------------------------------------------------------------|
| 1 | Permission ENDORSEMENT.APPROVE | FE      | —                                                          |
| 2 | Reinsurance complete           | FE + BE | ins_reinsurance_data : Σ share = 1 per detail_id for stage |
| 3 | Config complete                | FE + BE | ins_policy.business_type AND policy_type set               |
| 4 | Pending                        | FE      | ins_policy.status = PND                                    |
| 5 | Submitted                      | FE      | ins_policy.approved_status = SBM                           |

**Reject writes:** ins\_policy.status → REJ , approved\_reason , approved\_at , approved\_by . Column approved\_status stays SBM . FE payload key approved\_status: "REJ" maps to column status .

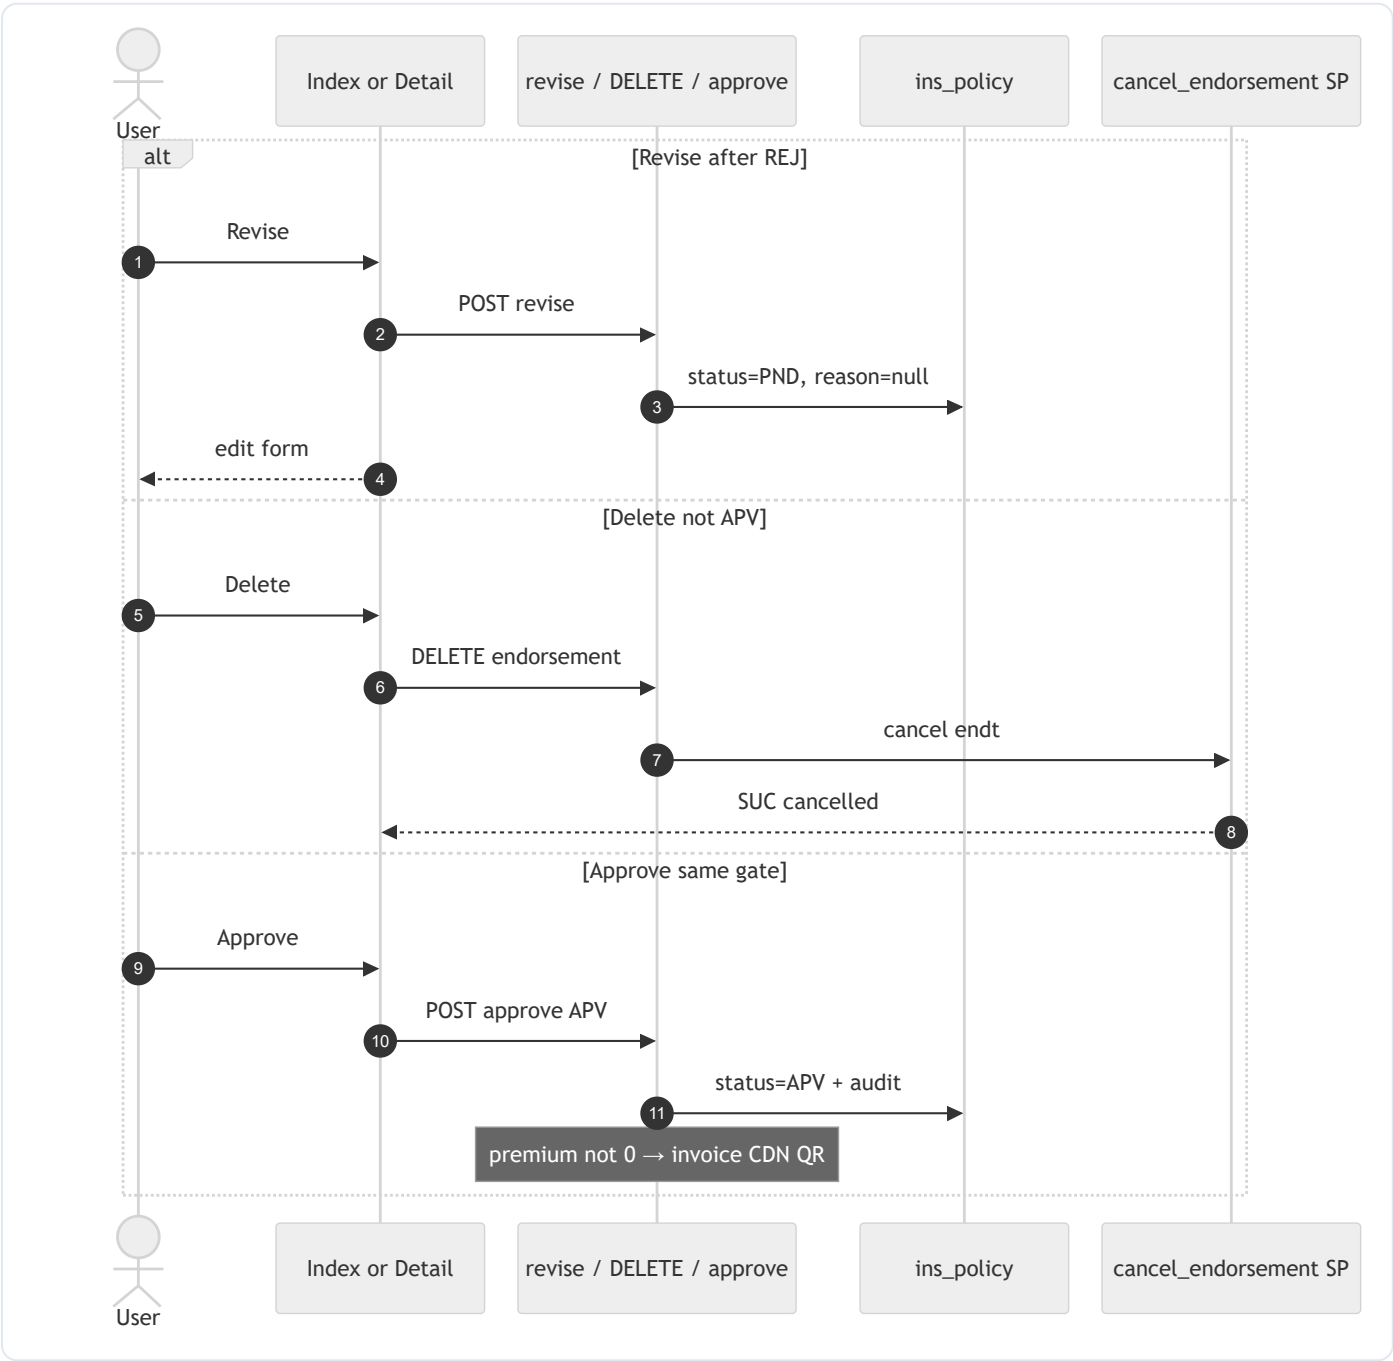

### 4. Status matrix

| status | approved_status | User can                                           |
|--------|-----------------|----------------------------------------------------|
| PND    | PRG             | Edit · Submit when RI ok · Delete                  |
| PND    | SBM             | Approve <b>or</b> Reject (if RI + config) · Delete |
| APV    | (unchanged)     | Print · Generate next · no edit/delete/approve     |
| REJ    | (still SBM)     | Revise → PND · Delete                              |

## 5. Sequence — full path + reject

## 6. Sequence — revise / delete / approve

## 7. Tables & columns cheat sheet

### ins\_policy

| Column          | Role                                      |
|-----------------|-------------------------------------------|
| id              | Endorsement pk (URL :id)                  |
| data_id         | → ins_auto_data_master.id                 |
| document_no     | Endt no (= RI endorsement_stage)          |
| status          | PND → APV / REJ                           |
| approved_status | Submit: PRG / SBM (not flipped by reject) |
| approved_reason | Remark                                    |

| Column                      | Role        |
|-----------------------------|-------------|
| approved_at / approved_by   | Audit       |
| business_type / policy_type | Config gate |

### ins\_reinsurance\_data

| Column            | Role                          |
|-------------------|-------------------------------|
| policy_id         | = endt ins_policy.id          |
| detail_id         | Vehicle detail                |
| endorsement_stage | = document_no                 |
| share             | Must sum to 1.0 per detail_id |

## 8. Verify SQL

```
-- Endorsement row
SELECT id, document_no, data_id, status, approved_status,
       business_type, policy_type, approved_reason, approved_at, approved_by
FROM ins_policy
WHERE id = :endt_id;

-- Config gate
SELECT (business_type IS NOT NULL AND policy_type IS NOT NULL) AS config_ok
FROM ins_policy WHERE id = :endt_id;

-- RI gate
SELECT detail_id, SUM(share) AS total_share
FROM ins_reinsurance_data
WHERE policy_id = :endt_id
      AND endorsement_stage = :document_no
GROUP BY detail_id;
```

## 9. vs Auto Quotation reject

|               | Quotation                          | Endorsement                     |
|---------------|------------------------------------|---------------------------------|
| Table         | ins_quotation                      | ins_policy                      |
| Reject column | approved_status or accepted_status | status                          |
| Submit column | n/a (two steps)                    | approved_status = PRG / SBM     |
| Accept step   | Yes                                | No                              |
| Extra gates   | UW only                            | RI + business/policy type + SBM |
